PIL Logistics has successfully completed the first phase of this transportation project from China to Ghana

We are happy that PIL Logistics has successfully completed the first phase of this transportation project from China to Ghana. We are confident that PIL Logistics, with the team's expertise, experience and knowledge, will continue to perform well for the remaining phases of the project.

On 10 December 2022, PIL Logistics in China and its parent company PIL worked closely to successfully coordinate the export of 52 shipper owned container (SOC) tanks from China to Tema Port in Ghana. This first batch of containers was closely monitored and carefully transported from a factory in Jiading, Shanghai to Shanghai's Waigaoqiao Terminal. There will be subsequent batches of containers to be transported, with a total of 502 SOC tanks to be delivered to Ghana by mid-2023.

Over the last 20 years, PIL Logistics has accumulated vast experience in the transportation of special containers, which include the handling and storage of liquids. The successful execution of this special transportation project is testimony of PIL Logistics' strong capabilities in managing complex transportation projects to deliver customised solutions which add value to its customers' supply chain.

The export of liquid cargo, including chemicals for industrial purposes, out of China has been increasing year on year. As such, PIL Logistics endeavours to continue strengthening its capabilities further to support more customers with specialised requirements.
