## PIL delivers first shipment in new Controlled Atmosphere Reefer Cargo from Callao to Hong Kong

In support of the diversified needs of its customers, PIL recently added specialised reefer containers to its inventory of containers, including Controlled Atmosphere (CA) containers.

PIL is pleased to have successfully transported freshly harvested avocados from Callao in Peru to Hong Kong on 23 September 2022 in one of its new CA containers. The shipment was made for a PIL customer which is a major fresh fruit and vegetables distributor based in China.

CA reefer containers employ advanced technology to regulate carbon dioxide, oxygen and nitrogen levels within the container. It therefore provides an optimum environment for transporting a wide variety of fresh produce over long distances and transit times, as it slows down ripening and vastly improves the shelf life of fresh food.

The avocados have arrived in China garden fresh for local consumers to enjoy the fruit at its best.
