PIL enhances landside logistics for customers by optimising flow of empty containers

4 December 2023

PIL is enhancing landside logistics for our customers in Malaysia by leveraging MatchBox Exchange - Container Logistics to optimise the flow of empty containers.

MatchBox Exchange is a digital platform that enables all logistics stakeholders to exchange or reuse shipping containers between themselves, bypassing trips to empty container parks. Currently, empty containers are sent to container parks once customers have unpacked them, and are retrieved from these depots when customers need them.

With this logistic solution, customers who require empty containers can simply use the platform's Exchange feature to obtain one from a nearby party who wants to offload their empty containers. If customers already have empty containers in their possession, they can even Reuse these containers through this platform.

By eliminating the need to transit through container parks, customers can look forward to improving supply chain productivity, reducing transport costs, as well as lowering their overall carbon footprint! ⚙️💰🌿

As part of PIL's commitment towards "Driving Connectivity" for the logistics community, we will also explore expanding such service to our other customers beyond Malaysia! By tapping on innovative solutions like Matchbox Exchange, we can empower our customers to make efficient and eco-friendly logistics choices!
