Sustainable Shipping (Part 2): A Journey of Sustainability from Port to Port | A COP28 Video Series

27 December 2023

 At the 2023 United Nations Climate Change Conference (COP28) held in Dubai, UAE from November to December 2023, PIL presented a series of three videos to showcase how the shipping industry can be a solution to combat global warming.

 Currently, the shipping industry mainly uses heavy fuel oil to power their vessels. In this episode, we explore how various alternative fuels can empower shipping lines to reduce their greenhouse gas emissions, and examine the challenges arising from adopting such fuels.

 The video shares how stakeholders around the world, like governments and port alliances, can work alongside shipping lines to decarbonise global supply chains. We also present the actions that PIL has taken in ensuring a sustainable and greener future!

 Click on the link below to watch the video now! Stay tuned as we bring you the final episode of our Sustainable Shipping series next week!
